MEMORANDUM

To: Cephia D. Toomer
From: Matthew P. McWilliams, Reg. No. 46,922
Date: June 3, 2003
Re: Application S/N 09/991,801

Please find attached 4 pages from two text books. The second page is a blow up of the first page to highlight the definition of "scorch", which is the subject of the Calabrese reference. The third and fourth pages concern the beta-scission reaction that occurs in polypropylene that the present application is drawn to.

In addition, Applicants propose the following amendments to claims 1 and 14.

1. (Amended) A stabilized polypropylene for use in fiber processing comprising:
a polypropylene, said polypropylene being coated with a stabilizer system consisting essentially of: 50 to 100 ppm of a phenolic anti-oxidant; 150 to 500 ppm of a liquid phosphite; and a liquid carrier.

14. (Amended) A method for improving the melt viscosity control of polypropylene ~~for use in~~ fiber processing, the method comprising:

applying a stabilizer composition to a polypropylene, said polypropylene being in powder, flake or pellet form, wherein said stabilizer composition consists essentially of:
approximately 50 -100 ppm of a phenolic anti-oxidant; approximately 150-500 ppm of a liquid phosphite; and a liquid carrier.
